

LOCAL ROADS CONNECTIVITY PROJECT

Municipality of Konce

Local road „1“ (815,59 m) in village Rakitec-Municipality of Konce

Introduction – General information about the project

Local Street "1" in the Rakitec settlement has a total length of 815.59 m and is in very poor condition with potholes, transverse, longitudinal cracks and damage and cracks resembling crocodile skin. The project street currently has no sidewalks and no vertical and horizontal signage. The route begins about 250 meters northeast of the junction with the regional road R2434 and ends near the cultural center in the Rakitec settlement. The local street is mostly composed of individual houses. On the right side near the beginning of the route is the only local shop in the settlement. The primary school "Goce Delchev" is located on the left side of the route, about 500 meters from its beginning. Right next to the school, there is a football field and a bus stop. Opposite the school "Goce Delchev" at the end of the path is a cultural center. Currently, the cultural center is also not in operation.

The basic design elements of the street:

- BNHS 16 (Bituminized wear layer)..... d=7cm
- Tampon layer of crushed stone aggregate with fraction 20/70mm..... d=30cm

The following pavement structure is envisaged for the sidewalks:

- Paver elements..... d=6cm
- Fine sand..... d=5cm
- Buffer layer of crushed stone aggregate with fraction 20/70mm

The leveling solution is determined by the actual elevation of the terrain.
